## Introduction

### Scope

This document describes errata categorised by level of severity. Each description includes:

- the current status of the defect
- where the implementation deviates from the specification and the conditions under which erroneous behavior occurs
- the implications of the erratum with respect to typical applications
- the application and limitations of a 'work-around' where possible

### Categorisation of Errata

Errata recorded in this document are split into three levels of severity:

Category 1	Behavior that is impossible to work around and that severely restricts the use of the product in all, or the majority of applications, rendering the device unusable.
Category 2	Behavior that contravenes the specified behavior and that might limit or severely impair the intended use of specified features, but does not render the product unusable in all or the majority of applications.
Category 3	Behavior that was not the originally intended behavior but should not cause any problems in applications.
Implementation	Errata that are of particular interest to those implementing the product and that have no software implications
System	Errata or possible issues that have system implications and therefore should be considered by system designers
Documentation	Errors in the Documentation that may have implications for programmers, system designers or programmers resulting in incorrect behaviour or the ARM Core.

## Change Control

Errata are listed in this section if they are new to the document, or marked as “updated” if there has been any change to the text of the erratum Description, Conditions, Implications or Workaround. Fixed errata are not shown as updated, unless the erratum text has changed. The summary table identifies errata that have been fixed in each product revision.
